

COOPERATIVE ECONOMIC INSECT SURVEY REPORT
Glenn A. Salsbury, Survey Entomologist

Report 12, Volume 58
September 10, 2010

SMALL HIVE BEETLE: Has been confirmed from 11 hives at one site in Coffey County.

REDHEADED ASH BORER: Adults are still active.

BLACK VINE WEEVIL: Found in yews at one nursery in Johnson County.

EASTERN FIVE SPINED IPS: Adult beetles that had been extracted from a dead white pine were observed to have nematodes emerging from under the elytra when placed in alcohol. The nematodes will be examined to determine if they are the same species that causes pine wilt.
